

Security for industries

SECURSAT

Build your security

New challenges

New security tools for Industry in a changing environment to deal with all complex needs of the resources management. A **global integrated model** able to realise synergies between inter-related requirements of security and safety.

Overall security to protect business by the different types of risks and threats, to reduce costs and inefficiencies and to realize investment return.

Security as strategic asset for improve operational efficiency in accordance with investment and budget.

Return on investments

As a security provider Secursat mission is design operative and organizational integrated solutions able to achieve a significative ROI, enhancing industry equipment.

Cost savings

Intelligent, innovative and integrated technology to mitigate the operative inefficiencies, to reduce false alarm and to maximise the effectiveness.

Policy setting

Legal consultants and sector experts available to help customers to comply with laws and regulatory adjustments.

Our model

Integrated security

Secursat manages security as strategic asset, creating an integrated and intelligent system to data collection and to develop scenarios.

Intelligence security

Avant-garde technology to intelligent complete remote monitoring. System customization following customer's experience, self-learning process, false alarm reduction, autonomy and business development.

Innovation

Security is not the last stop. Experience and competences in a Security Solution Lab to study, all time, innovative solutions, to create value and to generate competitive advantage.

Security governance

Strategic and effective security governance model built for industries sector, in line with the constant technological and digital market evolution and with the industry mission and policies.

Assessment

Check and analysis:

- Passive/active protection systems: Safes, Video-surveillance, Security doors, Anti-intrusion, Fogging system, etc.
- Procedures and Activities organization: Roles and responsibilities, technical measures, etc.

Risk analysis

Map and analysis:

- Historical, existing and future risk:
- Environmental risk, sabotage data protection, ticket management, loss of control or trust, administrative penalties, reputational damage, etc.

Mitigation

Solution for:

- Equipment innovation
- Ticket and document management
- KPI definition
- Design integrated system

Action tools

- Overall integrated security system
- Complete remote monitoring
- Standardization process
- Security governance model multidimensional and scalable

Predictive and analytics modelling

Operative and organizational strategies to build innovative and analytic security models to mitigate but also prevent risk and threats, thanks data collection and analysis.

Design

- Design, install and realize integrated security solutions
- Overall, strategic and timely events and alarms management
- Video analysis

Maintenance

- Asset census
- Analysis equipment operational status
- Possibility to integrate/innovate
- Preventive and corrective maintenance over time
- Failure, breakdown management

Monitoring

- Innovative technologies for remote monitoring
- Control Room h24
- Customizable, self-learning system

Security compliance and business ethics

Experts and certificated Privacy Officer to analyse and define action and procedures for industry global security, always compliances at national and international rules and standards to maximise business ethics.

Security and safety

- Employer's obligation
- Monitoring technologies and safety for isolated workers
- Workers health and Wealth
- Travel Security

Privacy

- Documentations/procedures analysis
- Practical administration Italian directive for CCTV
- Technical report CCTV..
- Declaration of conformity 37/08
- Sings adequacy
- Privacy Officer consultancy

Company Risk

- Crisis management
- Continuity business and disaster Recovery

Video analysis

Recorded videos are analysed just after events. Video analysis in real time turns image in data to realize strategies based on statistics and real information, useful from security to marketing and commercial purpose too, a new instrument to build an innovative strategy to take a competitive advantage.

About video analysis

Algorithms applied to video flows to extract in real time information useful for security and commercial purposes.

Why video analysis?

Exploit investment in video-surveillance system.
Collect clear, intuitive information, create analyses and statistics.
